Why Alfasente ?

Easier Funds dissemination regardless of Digital Financial Service Provider.

Easier Records Management and Accountability for businesses.

Bulk Account Verification before funds are sent. Using Account Lookup

Experience during Implementation

- It was challenging to go bulk payments since the mojaloop ttk only supports one payment at a time.
- There needs to be clear documentation on how to go about account linking.
- Limited number of dfsps in the sandbox to test with.
- Multi currency Support.?
- The Approval Process during account Linking

Recommendations

Support for bulk payments at an infrastructural level.

Allow for bulk list submission for each step of the 3PPI process.
