# A REMINDER OF WHY WE BUILT THE FRAUD RISK MANAGEMENT SOLUTION

ACTIO – TRANSACTION MONITORING SYSTEM

1

# WHY?

*Need and purpose.*

Because Mojaloop needed anti-fraud, AML, CTF products that work with it?

Well, that's true. But there are other reasons.  
(This works with more than Mojaloop)

# WHY AN OPEN-SOURCE FRAUD RISK MANAGEMENT SYSTEM?

## Fraud is a major issue—and it's getting worse

*“With more than 4.5 billion people online, more than half of humanity is at risk of falling victim to cybercrime at any time, requiring a unified and strong response.”*

**Jürgen Stock,**  
INTERPOL Secretary  
General

### Fraud is expensive for:

- Those who are defrauded
- The system – defending against fraud costs tremendous amount to each player in the ecosystem
- Government, both dealing with their own fraud, and helping others to defend against it.

### Impacts of Fraud

Human

Government Outcomes

Reputational

Government Systems

Industry

Environmental

Security

Financial

Business

Based on international estimates, public bodies generally lose between 0.5% and 5% of their spending to fraud and related loss.

The private sector fears reputational impact and does not generally disclose, but according to Merchant Savvy, global losses of payment fraud have tripled to \$32.39 billion in 2020 and are expected to continue to cost \$40.62 billion in 2027 which is 25% higher than in 2020.

Therefore, the increase in fraud cases restrains the growth of the payments markets and financial inclusion, and this largely ignores informal markets.

\$\$\$

### Dramatic Cost Savings

Open source is source code that is made freely available for modification and redistribution. Products include permission to use the source code, design documents, or content of the product. The OSS model is a decentralized software development model that encourages collaboration. A main principle is peer production, with products such as source code and documentation freely available to the public.

## A SPECIFIC NEED FOR FINANCIAL INSTITUTIONS

- Budgets are limited, needs are high.
- Smaller organizations are frequently forced to “make do” with what they have or solutions that are sub par.
- Significant barrier to entry for start ups and those focusing on financial inclusion.
- Transactional monitoring systems are expensive because they are hard
  - To build and hard
  - To implement
- We have significantly reduced the Total Cost of Ownership by providing an Open-Source Solution.

# FRAUD RISK MANAGEMENT SYSTEM LANDSCAPE

## Governance Risk and Compliance (GRC)

### Risk Management

#### Administrative

Assessment

Policy  
Management

Compliance

### Reporting (regulatory, management)

#### Batch

Identity  
Management  
(KYC, Sanctions,  
UBO)

Anti-Money  
Laundering  
/Counter Terror  
Financing  
Non-real-time

#### Real Time

Transaction  
Monitoring –  
Fraud, AML, CTF  
(Real-Time, Near  
Real-Time, Batch)

# ACTIO OSS TRANSACTION MONITORING SYSTEM: HIGH LEVEL DESCRIPTION

## An Open-Source Solution for Fraud and Risk Management

Includes the 30+ highest-priority fraud typologies

Implementable by DFSPs, Software Publisher and payment networks

Designed for low-cost operation

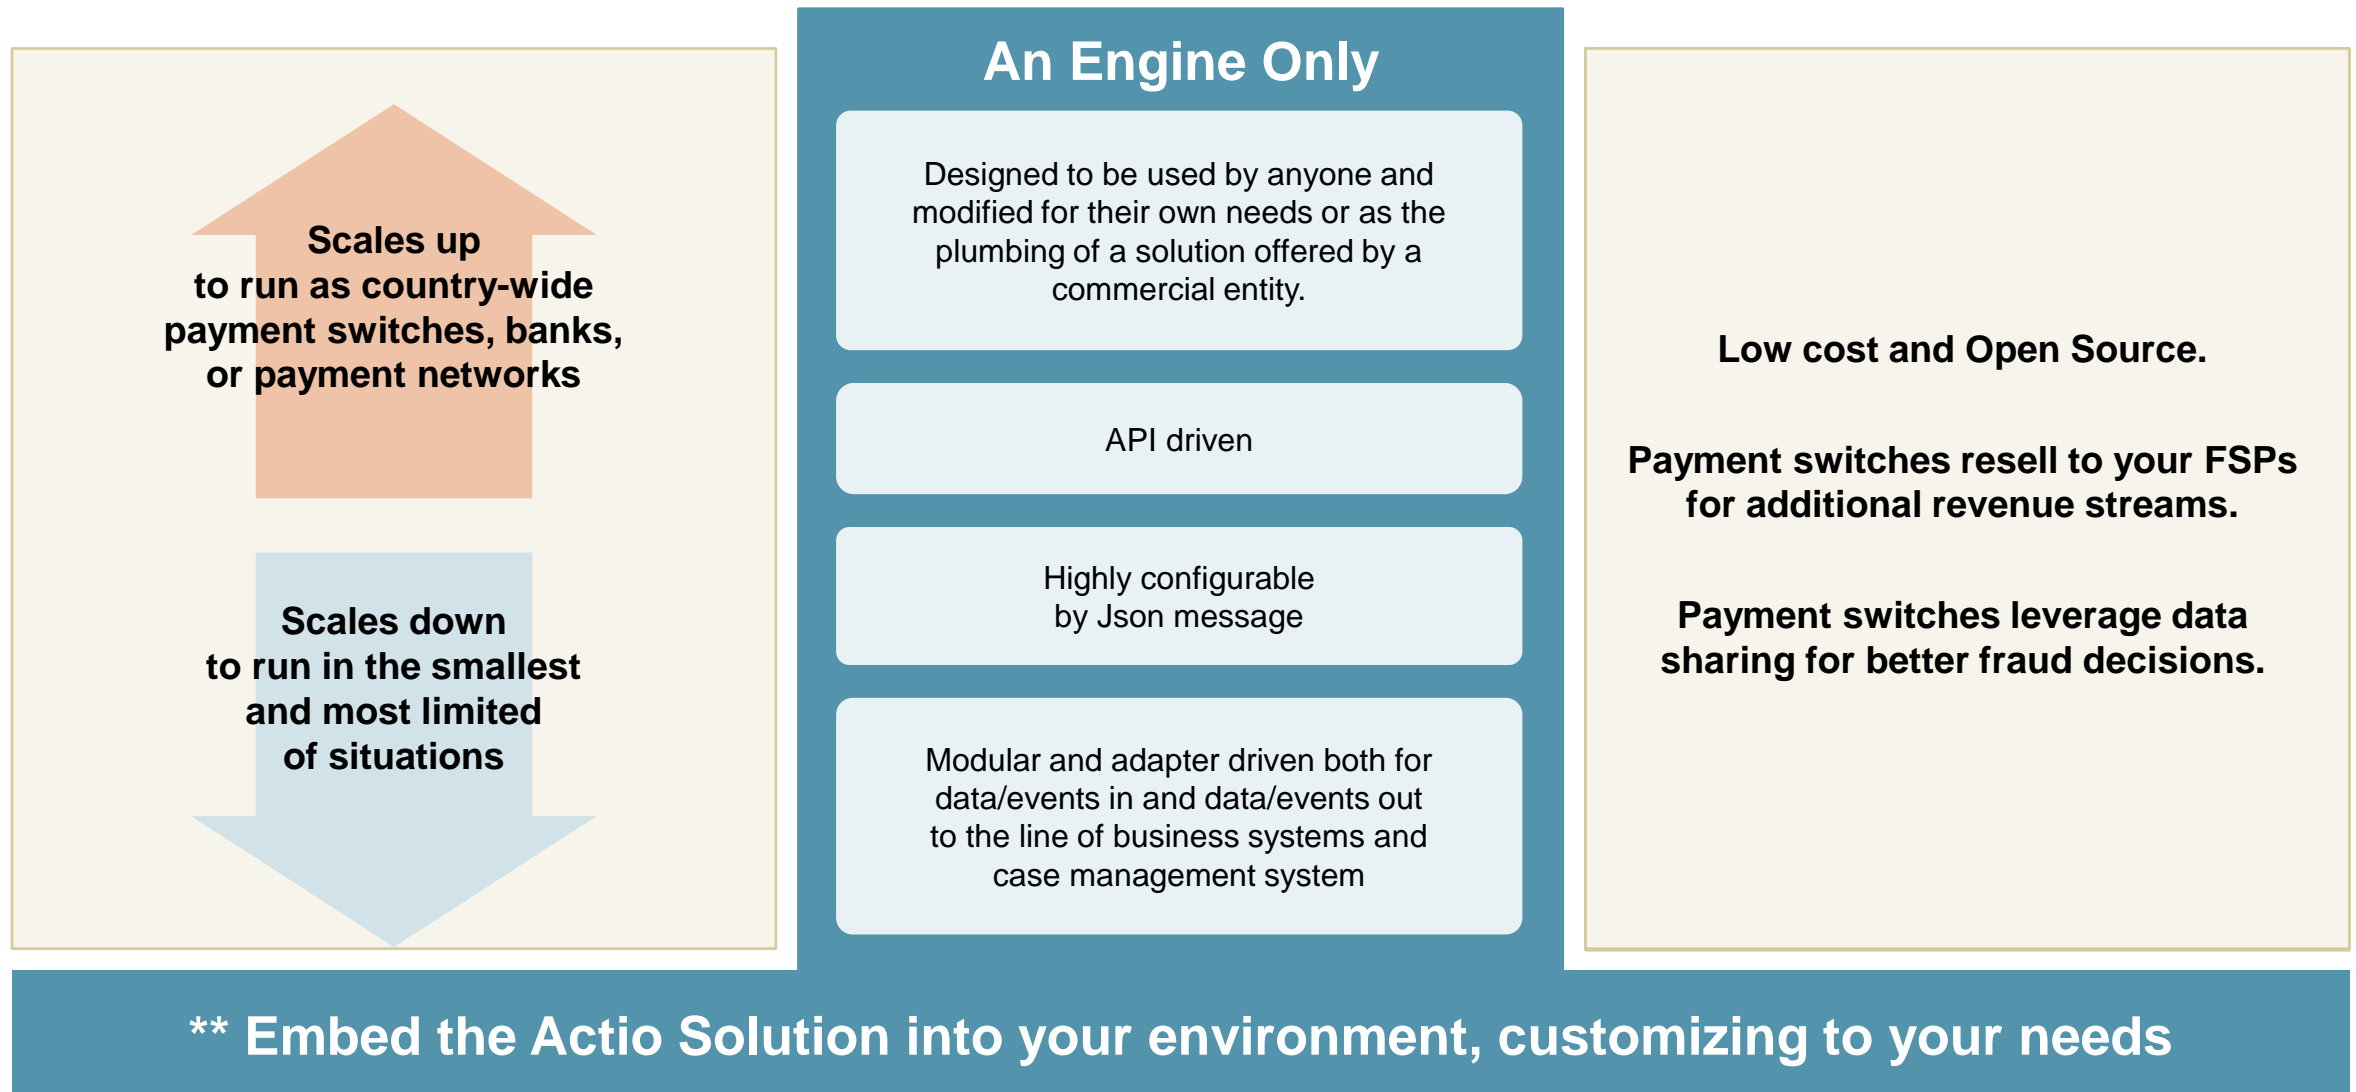

Designed to scale up and down to suit needs and costs

## This is the Transaction Monitoring System

**The most difficult component**  
*(real-time capabilities, many moving parts, integration with other systems)*

**It works in concert with other components of a comprehensive fraud program**  
*KYC/UBO, Investigation, GRC Programs*

# HOW IT WORKS A REMINDER

**STATUS UPDATES:**

2

# ACCOMPLISHED

*Completed to date*

**Not Everything  
We've  
Been Busy**

1. MVP Complete April
2. FRMS CoE "Theoretically Created"
3. Implementation of Neutral Systems for
  - A. Documentation
  - B. Code
  - C. Access Control Defined
4. Completion of conversion to CoE Neutral Systems
5. Approved Messaging
6. Planning of Convening for potential testers
7. Identification of potential early adopters
  - A. One Commercial Fork Already with customers.
8. The great UX debate
  - A. Created 1 OSS CMS Integration
  - B. Sybrin to allow evaluators and testers to use their more complete UX

# TO DO

*Some of what there is to do ...*

**Not Everything  
There Will  
Be More**

1. Underway, what OSS Group do we fall under?
2. Creation of the actual Center of Excellence, governance et al
3. Funding partnerships actively being sought
4. Initial Implementations
  - A. Potentials So far – 5
5. Performance Case Study
6. Potential Guidebooks
  1. How to implement, Analysis and Typologies
  2. Typology accuracy testing with FCA Synthetic and Real Data
7. Match Implementations Needs to Product Roadmap (and Build)
8. Refinement of mission based on market and funder inputs
9. Much later in the year look for synergies
  - A. Consumer Protection Mappings
  - B. To support Regulators

# TECHNICAL DELIVERABLES

3

# DELIVERABLES

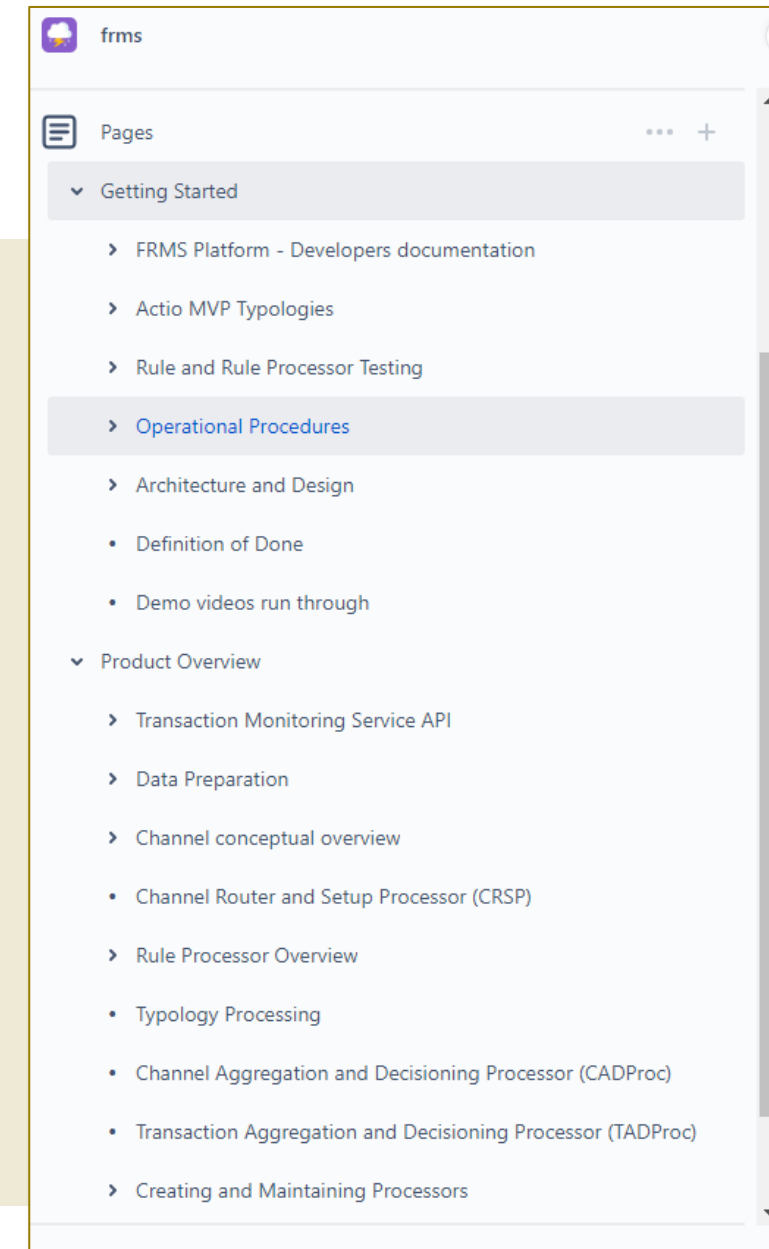

## Create FRMS CoE

Implementation of the FRMS CoE, Systems, Governance, Access Control:

- Create neutral CoE for FRMS code repositories - <https://github.com/FRMSCoE>
- Create neutral CoE for FRMS document repositories - <https://frmscoe.atlassian.net/wiki/home>
- Create neutral CoE for FRMS CI/CD pipeline
- Define operational procedures
- Creation of the Payment Platform Adapter for Mojaloop
- Integrate with 1 OSINT data source for sanctions - FIC
- Integration with Case Management Systems for investigations:
  - Open-source CMS: Nuxeo
  - Commercial CMS: Sybrin

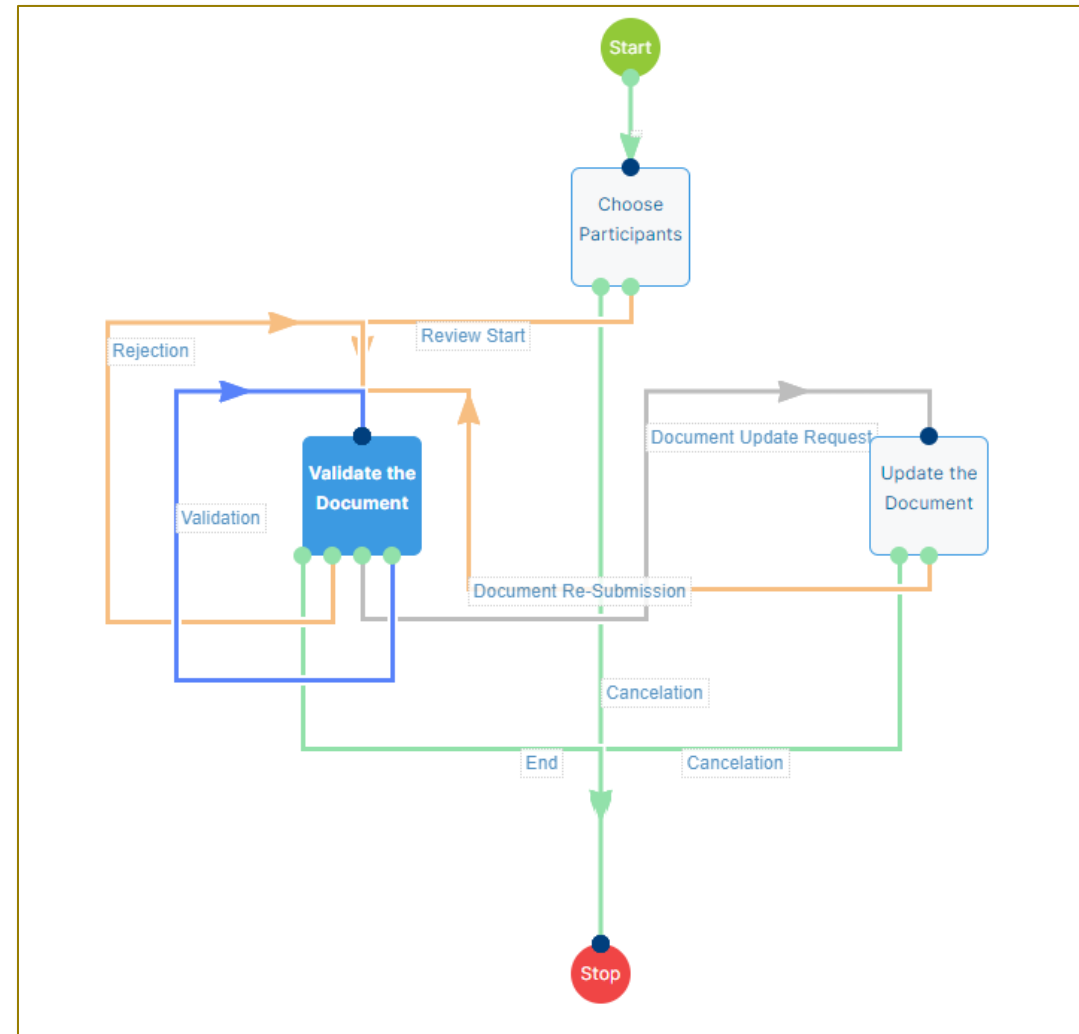

On-boarding:

- Thitsaworks, Glenbrook, Mifos and Converge Solutions have all shown interest and has been on-boarded to the new CoE controlled repositories

# WHAT'S NEXT - PERFORMANCE

## *Performance benchmark*

1. Optimizations
2. Scale up components - Nifi, Arango (from standalone to cluster), Redis, ELK (convert to cluster deployment)
3. Performance testing (run performance test at scale to aim to achieve 3000 tps)
4. Benchmark
  - Requirements for 3000 tps
  - Minimum spec required to run Platform
  - Cost / cloud requirement Estimate per 1k tps (eg 1k, 2k, 3k)
  - Propose optimized infrastructure architecture document for > 3k tps
  - Scaling of processors in OpenFaas (force up / down scaling of a processor)
  - System sizing-related performance - Costs for 3000 tps & Minimum cost
5. Endurance test
  - A 3 day real world scenario, that fluctuates the load e.g. (Idle at 50 TPS, medium load of 800 TPS, and peak load of 3,000 TPS)
  - Ability to provide a short and repeatable test scenario demonstrating the performance metrics.
  - Create test data that will contain representative volumes of fraud for each typology. Ideally reach a 1% fraud rate triggering the different typologies on a repeating dataset of ~10 000 transactions

# TYPES – PATTERNS OF FRAUD

## The Typology Life Cycle

**Develop the Rules**

**Compose the Typology**

**Deploy the Typology**

**Calibration**

### Example: Typology No. 28, Scams

003@1.1.0	Account Dormancy - Creditor
008@1.0.0	Outgoing Transfer Similarity - Creditor
010@1.0.0	Increased Account Activity - Debtor
011@1.0.0	Increased Account Activity - Creditor
016@1.0.0	Transaction Convergence - Creditor
018@1.0.0	Exceptionally Large Outgoing Transfer
021@1.0.0	A Large Number of Similar Transaction Amounts - Creditor
025@1.0.0	Aggregated Transaction Mirroring
027@1.0.0	Immediate Transaction Mirroring
028@1.1.0	Debtor age
030@1.0.0	New Creditor transfer
034@1.0.0	Watch-listed account - Debtor
035@1.0.0	Watch-listed account - Creditor
036@1.0.0	Watch-listed party - debtor
037@1.0.0	Watch-listed party - creditor
048@1.0.0	Large transaction amount vs history - Debtor
063@1.0.0	Synthetic data check - Benford's Law - Creditor

# A USER STORY

*Users act, rules are assessed, and you look for patterns of fraud, or typologies.*

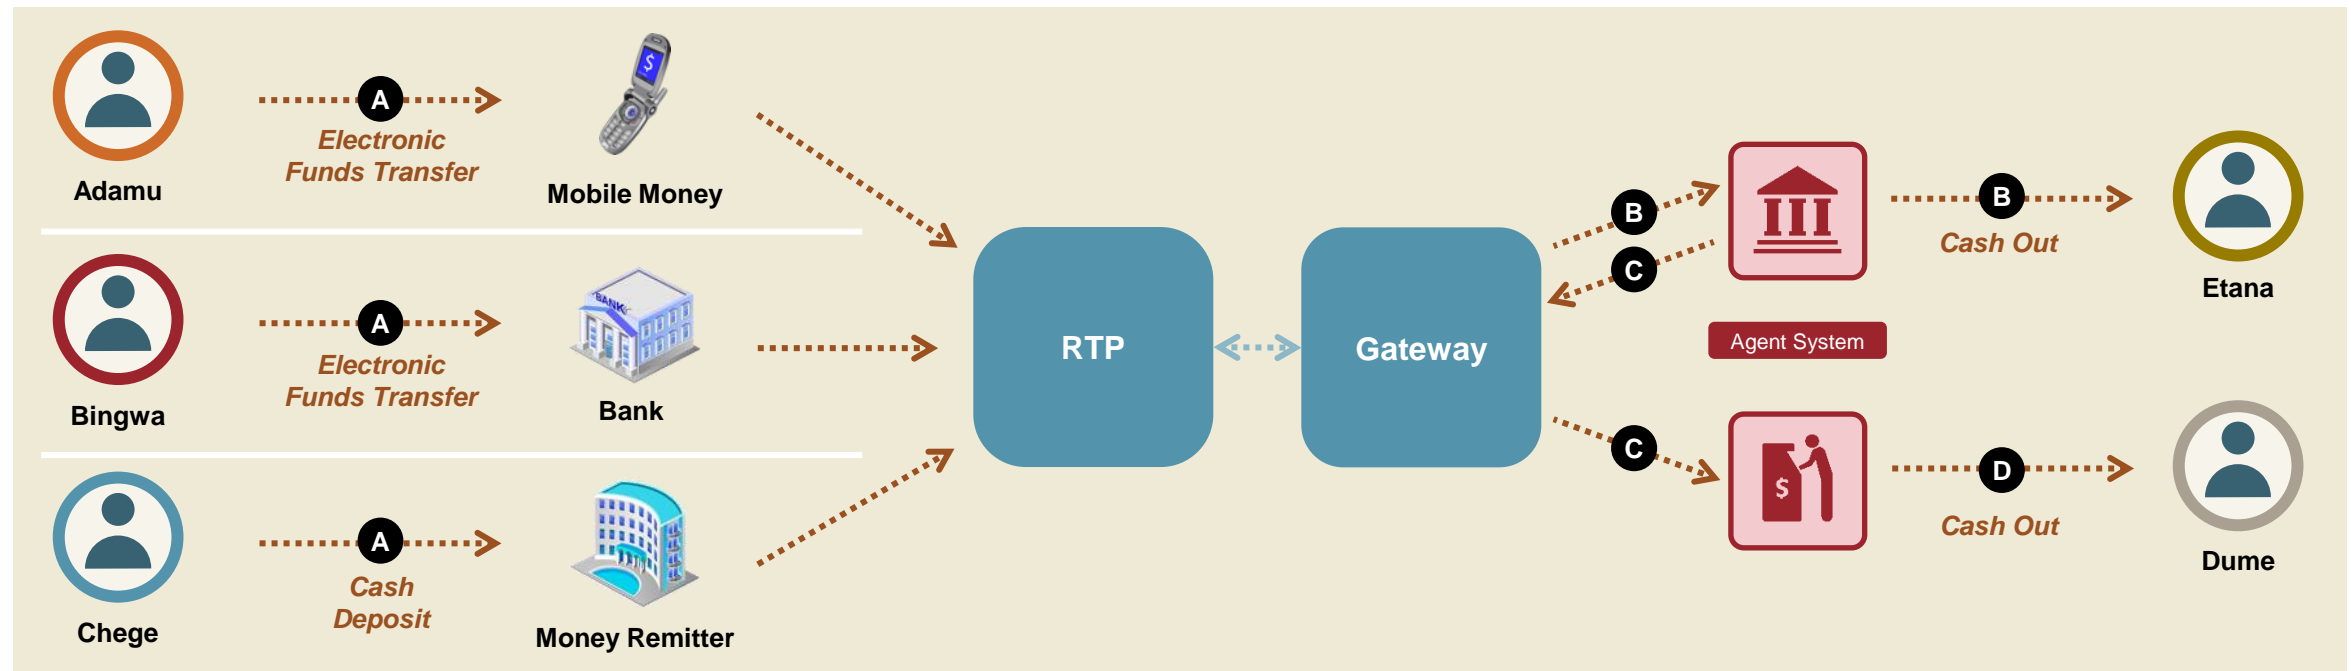

Etana convinces Adamu, Bingwa and Chege that they'd won a prize and need to pay a small administration fee to process their winnings.

**A.** They each transfer the money to Etana's account. (Amounts are very similar for each transaction).

**B.** As each payment arrives, Etana immediately cashes out the payment.

**C.** Adamu's payment arrives after the money agent has closed for the day so Etana immediately transfers his payment to her associate, Dume.

**D.** Dume cashes out the payment first thing the next morning.

# DO THE ACTIONS SHOW A PATTERN OF FRAUD?

## Typology

### Example

**Typology 28: False promotions, phishing, or social engineering scams.**

*(e.g. fraudsters impersonating providers and advising customers that they have won a prize in a promotion and to send money to the fraudster's number to claim the prize).*

## Rules

003@1.1.0	Account Dormancy - Creditor	X
008@1.0.0	Outgoing Transfer Similarity - Creditor	X
010@1.0.0	Increased Account Activity - Debtor	
011@1.0.0	Increased Account Activity - Creditor	X
016@1.0.0	Transaction Convergence - Creditor	
018@1.0.0	Exceptionally Large Outgoing Transfer	
021@1.0.0	A Large Number of Similar Transaction Amounts - Creditor	X
025@1.0.0	Aggregated Transaction Mirroring	X
027@1.0.0	Immediate Transaction Mirroring	X
028@1.1.0	Debtor age	
030@1.0.0	New Creditor transfer	
034@1.0.0	Watch-listed account - Debtor	
035@1.0.0	Watch-listed account - Creditor	
036@1.0.0	Watch-listed party - debtor	
037@1.0.0	Watch-listed party - creditor	
048@1.0.0	Large transaction amount vs history - Debtor	
063@1.0.0	Synthetic data check - Benford's Law - Creditor	

## Alert

**Enough Rules  
were Broken  
that a Fraud Alert  
was Triggered**
