

Digital Sandbox Pilot

The UK Financial Conduct Authority Digital Sandbox
(and somewhere in the mix the importance of Data in a Sandbox)

Rob Reeve, CEO LexTego

Matt Allan, Founder Fintech Sandpit

The Original FCA Sandbox

- The FCA provides a Regulatory Sandbox which allows the testing of new services in real life situations
 - Banks could interact more easily with Fintechs
 - Fintechs could operate without gaining full regulatory cover – whilst still abiding by the rules
 - Regulatory oversight was able to assess new services
- This encouraged the implementation of new services but did not improve overall interoperability of these services
- Tech Sprints were introduced, but they were primarily UK Centric and not scalable
- GDPR increased the challenge for the proposed Virtual Sandboxes
- The regulatory sandbox started the trend – we expect the new digital sandbox approach to do the same

FCA sandbox ↔ Mojaloop - Why?

- In the FRM delivery – we hit a big challenge.
 - We need a lot of unique data to actually test the platform
 - We dubbed it the search for Atlantis - as we needed to create realistic:
 - Geography
 - Streets
 - Towns
 - Countries
 - People
 - Individuals / Families
 - Entities
 - Social networks
 - Device Profiles
 - Transactions

FCA sandbox ↔ Mojaloop - Why?

- In the FRM delivery – we hit a big challenge.
 - We need a lot of unique data to actually test the platform
 - We dubbed it the search for Atlantis - as we needed to create realistic:
 - Geography
 - Streets
 - Towns
 - Countries
 - People
 - Individuals / Families
 - Entities
 - Social networks
 - Device Profiles
 - Transactions
- Fortunately that task was also being addressed by
- And a bit more

The FCA Digital Sandbox

- Providing a structure for collaboration
 - to build a community – mentors, participants, regulators
 - to address a common problem
- Giving a testbed for new services with access to other services APIs
- A very large shared data set for everyone to work with

Innovation through collaboration at scale

- Big industry problems are difficult to solve
- Community enables the collaboration required from all stakeholders to uncover these solutions
- Not just an API – a place to connect stakeholders and facilitate collaboration

Pillars of success:

1. Marketplace of services – enables discovery, access, and commercialisation of solutions (or free)
2. Community – supports the development of fit-for-purpose solutions
3. Data – enables solutions to target the right problem (synthetic or real)

Innovation through collaboration at scale

- Big industry problems are difficult to solve
- Community enables the collaboration required from all stakeholders to uncover these solutions
- Not just an API – a place to connect stakeholders and facilitate collaboration

Pillars of success:

1. Marketplace of services – enables discovery, access, and commercialisation of solutions (or free)
2. Community – supports the development of fit-for-purpose solutions
3. Data – enables solutions to target the right problem (synthetic or real)

Creating a framework for acceleration

Creating a framework for acceleration

Complex industry problems require open platforms with a marketplace and a community – something Mojaloop is also addressing!

Creating a framework for acceleration

Complex industry problems require open platforms with a marketplace and a community – something Mojaloop is also addressing!

Community benefits

- Exponential value exchange delivered as network grows
- Tech-Agnostic to changing business needs and services
- Global knowledge – mentors and experts facilitate solution development

Creating a framework for acceleration

Complex industry problems require open platforms with a marketplace and a community – something Mojaloop is also addressing!

Community benefits

- Exponential value exchange delivered as network grows
- Tech-Agnostic to changing business needs and services
- Global knowledge – mentors and experts facilitate solution development

Marketplace benefits

- Build off the knowledge of others platform – don't start from scratch (DRY)
- Connect once – international compatibility
- Discover and access best in breed solutions

Results – it works

Results – it works

Between Nov '20 and Feb '21 (ongoing), the UK financial regulator and City of London Corporation ran a Digital Sandbox Pilot to encourage the rapid development of solutions in response to Covid-19

Results – it works

Between Nov '20 and Feb '21 (ongoing), the UK financial regulator and City of London Corporation ran a Digital Sandbox Pilot to encourage the rapid development of solutions in response to Covid-19

**Facilitation of
collaboration of teams
that would not have
otherwise come
together!**

The network effect!

- Fraud and Typology Management see duplicate transactions as either:
 - A common pattern to be ignored
 - A suspicious pattern to be highlighted
- You run out of unique data very quickly at 10K TPS
 - 600K Transactions per minute
 - 36M Transactions per hour
 - 864M Transactions per day

Our challenge – data types

The benefit from the FCA sandbox

- We went in wanting data
 - 400M unique user transactions
 - 7M unique users
 - 600K unique businesses
- Adding data for our needs
 - Mobile / Web based transaction information
 - Password resets
 - Driving Licences / Passports
 - Transaction limits

The benefit from the FCA sandbox

- We went in wanting data
 - 400M unique user transactions
 - 7M unique users
 - 600K unique businesses
- Adding data for our needs
 - Mobile / Web based transaction information
 - Password resets
 - Driving Licences / Passports
 - Transaction limits
- We gained
 - Access to mentors
 - New partners
 - Interaction with the regulator
- Accelerating our thinking
- Giving us new options
- Whilst testing our solution

 - Driving Licences / Passports
 - Transaction limits
- We gained
 - Access to mentors
 - New partners
 - Interaction with the regulator
- Accelerating our thinking
- Giving us new options
- Whilst testing our solution

A lot more than just a technical integration

Thank you
